

Did you know the Sun is losing weight? It sends out particles called the solar wind that take away some of its mass. The Sun loses one billion kilograms every second. That's 100 elephants every second! The Sun is so big that this doesn't matter much. But over time, the Sun will shrink and fade. So let's appreciate its warmth and light. I hope you learned something new. Please like and follow for more videos. Thanks! 😊
