

Hey, did you know that the Sun is constantly losing weight? That's right, every second, the Sun loses about one billion kilograms of matter due to the solar wind. The solar wind is a stream of charged particles that escape from the Sun's surface and travel through space. To put that in perspective, that's like losing the weight of 200 Eiffel Towers every second! But don't worry, the Sun still has plenty of mass left to keep shining for billions of years. Follow me for more crazy facts about space!
